Saf-T-Change™ Quick Disk Replacement (QDR™)

The downtime and associated production losses experienced by process plants following a rupture disk activation can be reduced substantially by having a spare disk and holder ready to install. This can be improved even more by

having a system which doesn't require multiple personnel, the use of tools and equipment, and elaborate remediation prior to exposing operators to open piping. Introducing the BS&B Saf-T-Change™ Quick Disk Replacement (QDR™) system,

allowing rupture disks to be replaced in seconds instead of hours or days and get your process back up and running in the shortest time possible. Contact BS&B today for more information.

Typical 10" Rupture Disk Replacement			
	Traditional Rupture Disk	QDR	Benefits
Staff	3-people	1-person	2-people exposure <i>Saved</i>
Tools	Tools, cranes, etc.	Zero Tools	Hazard and Hassle <i>Saved</i>
Time to Replace	8-hours	< 10 minutes	8 hours of production <i>Saved</i>
Lost product @ \$10,000/hr	\$80,000	\$0	<i>\$80,000 Saved</i>
Inventory Cost	-	\$60,000	\$60,000
Savings*	-	-	\$20,000

*subsequent replacement savings of \$80,000 each
